
Experiment flow — rows: stages in run order · columns: modules · each stage reveals the next when its checks pass
Flow / module
Locked protocol
Acquisition harness
RepoAudit & Semgrep
ProofWeave ingest & ledger
Causality graph & Query API
TAIP & Gateway
Independent oracle
Report & artifacts
Console next stage
Setup
precondition, not a stage
target, required set R, τ, GREEN mapping, models locked
short pilot: evidence observable
lock verified → show Stage 1
Stage 1 Acquire & freeze
evidence · RQ1, RQ2
N runs × strata M Semgrep runs all runs kept
native logs + reports
sealed evidence bed run accounting
checks pass → show Stage 2
Stage 2 ProofWeave within
the threshold · RQ2
replay sealed bundles
t0 write request bind t1 · append t2
in graph t3 queryable t4
T_PW-ready vs 5 s corpus E sealed
checks pass → show Stage 3
Stage 3 Scale
threshold again · RQ2
10 → 10,000 records (synthetic marked)
ingest + append
weave + probe
latency per volume threshold crossing
checks pass → show Stage 4
Stage 4 Three GREENs,
not enough coverage · RQ1
divergent GREEN pair witness queries per r ∈ R
posture → HOLD / PROCEED + verdict-only
agreement + replay
decision traces .dot graph
experiment complete
Bonus Question the graph
not part of the experiment
read-only queries
intent agent explains
